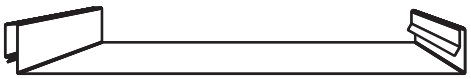
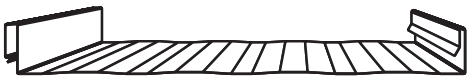
Panel Profile Option: (circle one from choices below)



Smooth Profile
(see disclaimer below)



Striated Profile

2 Pencil Rib Profile
(see disclaimer below)

2 Bead Rib Profile
(see disclaimer below)

Inseam Sealant Option: (check one from choices below)

Note: Inseam sealant is REQUIRED for all panels requiring a Weathertightness Warranty.

☐ Yes

☐ No

Note: Inseam sealant may require additional surcharge to panel pricing.

No Striations Disclaimer (Required for panels without striated profile)

The perceived waviness in flat metal commonly known as “oil-canning” is an inherent part of light gauge cold formed metal panels. Union Corrugating Company will not accept “oil-canning” as cause for rejection of panel system. Panels supplied by Union without STRIATIONS are susceptible to oil-canning due to the wide, flat surfaces. Stiffening ribs and striations located in the flat pan of standing seam roof panels are means of reducing this condition. Striations break up the flat portions of the panel and minimize the visual perception of oil-canning.

By signing below I understand that waves and other surface variations are not reason for rejection of standing seam roof panels provided by Union Corrugating Company. I understand that panels made with no striations are more likely to exhibit these characteristics.
