

PAINT FAILURE WITH INFERIOR SUBSTRATES

Independent lab accelerated weathering test results.

An independent testing lab performed accelerated weathering tests* of Union's MasterRib and Central States Mfg. 40 Year Standard panel. MasterRib uses an AZ50 Galvalume substrate with a corrosion warranty, while Central's panel uses a non-warranty Galvalume substrate.

- Paint failure due to edge corrosion was more than 15X worse with the non-warranty substrate.
- Paint warranties do not cover failure due to corrosion.
- Homeowners receive minimal savings yet expose themselves to high risk of failure.
- Ask your suppliers for both the paint and substrate warranties!
